Abstract (en)

The invention relates to a continuous tube for forming bags containing fruit and vegetable products, having at least one pair of mesh strips (1-1'), each of the mesh strips (1-1') being located once folded such that the edges defined by the mentioned folds (2-2') are opposite one another and separated a certain distance S; each mesh strip (1-1') having a fold at both ends, end portions (3-4; 3'-4') having width A being defined, B being the distance between the fold (2-2') and the free ends (5-6; 5'-6') of a single strip; a pair of laminar strips (7-7') having a width C equivalent to at least two times the distance B plus the distance S, and at least four reinforcing strips (8-9; 8'-9') having a width less than the width A of the end portions (3-4; 3'-4') of each of the mesh strips (1-1').
