Abstract (en)  
A method for regulating the movement of a train through an area of railway fitted with trackside radio signalling equipment, the signalling equipment controlled by a control centre, comprises the steps of: providing an interface unit on the train; reporting the initial location of the train to the control centre; using the control centre to select a route start location for the train, the route start location comprising a selected length of track from a reference point; and communicating the route start location to the interface unit using the signalling equipment.
