Abstract (en)  
[origin: EP1942475A2] The device has an escape route survey for representing overview display of escape routes (9, 12). Escape route displays (2, 3) are provided for display of the escape routes. A central computer (7) evaluates sensor data of monitoring sensors (6), where the escape routes displays are controlled based on the sensor data. The escape route survey is connected with a data circuit (8). Units for dry running operation, which is independent of the central computer, are attached to the central computer, during interruption of data connection.
