Abstract (en)
[origin: DE102005047075A1] The cleaner has two centrifugal separators (4, 5), each including an air inlet area (9) for suctioned, dust-charged air, and an air outlet area for purified air. Each centrifugal separator has an outlet for dust that is to be separated from the air in a dust accumulating container (3). The two centrifugal separators are arranged in a housing part (2) that is formed as cylindrical container. The air inlet areas are connected with each other, such that the two centrifugal separators are parallelly connected.
