Abstract (en)

[origin: WO2007036234A1] The present invention relates to an arrangement for the suspension of a number of wheels (7) on a chassis with opposite sides comprising two wheel suspensions (1), where each wheel suspension (1) is arranged on each side, where each wheel suspension (1) comprises a suspension frame (2), two support frames (3) and a first spring arrangement (4), and where the suspension frame (2) is connected to the chassis, wherein each support frame (3) is provided with an arrangement of at least three connection points (8, 9, 10), where the support frame (3) is rotably connected to the suspension frame (2) at a first connection point (8), where the support frame (3) is connected to a wheel axle at a second connection point (9), where the support frame (3) is connected to the first spring arrangement (4) at a third connection point (10), and where the third connection point (10) is arranged below the first and second connection point (8, 9) on the support frame (3).
