Abstract (en)
[origin: WO2007048606A2] The invention relates to a life jacket whose chest-level floating elements (4, 4') are adjacent to one respective additional floating element (5, 5'), both of which flip or fold upwards during use. For this purpose, the chest-level floating elements (4, 4') are anchored to the body belt of the life jacket via a belt or a band with a toggle that is inserted through an eye (9, 9').
