Abstract (en)

[origin: DE102005046049A1] The device has a sensor device (9) and a releasing flap (7) connected by a control device (10) in such a manner that the flap is opened when the sensor device detects a wrong filling of a container (3.1) of a sorting belt (2) until a number of containers (3) pass through the flap. The flap corresponds to a number of cups (6) of a blister strip which is to be separated from a blister thread (5) and is filled with a bulk material (4) of the wrong filled container (3.1).
