Abstract (en)
[origin: WO2007042013A1] The invention concerns an aerosol container comprising a first container (1) designed to hold a first substance as well as a second container (2) arranged in said first container (1) and designed to hold a second substance, an opening device (3) of the second container (2) actuatable from outside the first container (1) being associated with the second container such that the first and second substances may be mixed and/or contacted to form a product to be sprayed. The invention aims at designing an improved aerosol container so that it may be produced more advantageously and so that its disposal or its recycling may be facilitated. Therefor, the opening device (3) has at least one cutting implement (4) to cut the second container (20) around its circumference.
