Abstract (en)

[origin: WO2007036331A2] In a process for sorting items of mail, the items of mail are sorted according to machine-readable codes on the items of mail. According to the invention, the process is characterised in that the machine-readable code is generated in such a way that it contains at least two data tracks, in that one of the data tracks is designed in such a way that it contains a control clock, and in that the machine-readable code is analysed taking into account the control clock. Also disclosed are a device suitable for implementing the process and an items of mail provided with a machine-readable code.
