Abstract (en)

[origin: WO2007051666A1] The invention relates to a brush system for a motor vehicle actuating drive. The brush system has two carbon brushes, of which each is fixed to a leaf spring. Each of the leaf springs is for its part fixed to a punched contact. Furthermore, the brush system contains a printed circuit board which has conductor tracks and on which interference suppression components are placed. Electrical contact is made with the leaf springs by in each case one of the conductor tracks. Furthermore, the invention relates to a motor vehicle actuating drive which has a plastic housing into which a brush system is inserted.
