Abstract (en)

[origin: WO2007048677A1] The invention relates to an electric motor with a fixing adapter (2), wherein the fixing adapter (2) comprises a central, flat region, which is embedded between two flat damping elements (8, 8'), wherein a plurality of openings pass through the damping elements (8, 8') and the central region of the fixing adapter (2), through which openings fixing means (7) pass which at least partially bring about elastic compression of the damping elements (8, 8') by the arrangement comprising the flat damping elements (8, 8') and the fixing adapter (2) being pressed against a flat region (5) of a supporting structure (4), which is fixedly connected to the electric motor.
