Abstract (en)

[origin: WO2007053329A1] Method for managing a portable communication device comprising interchangeable accessory modules allowing different accessory devices to be used with the portable communication device. The accessory devices may include sensing devices, music players, displays, GPS receivers, user interfaces, cameras, memory devices, as well as others devices. The portable communication device manages and controls the interchangeable accessory modules by exchanging data and control signals through a connection interface.
