Abstract (en)

An angular machine for machining a workpiece (2) made of wood or similar materials comprises a mutually opposite first abutting element (21) and second abutting element (22) for abutting on respective end portions (9; 10) of said workpiece (2) and gripper means (51) for grasping said workpiece (2), which is movable towards and away from said first abutting element (21) and said second abutting element (22) and rotatable around a first axis (R2) having a working position contained in a plane (H) substantially equidistant from opposite abutting surfaces (24; 25) of said first abutting element (21) and of said second abutting element (22).
