Abstract (en)

[origin: EP1944243A1] The invention relates to a closure (2) engageable with a filler neck (1) comprising an opening (10) and a seal seat (11) disposed axially facing said closure, the closure comprising a cup-shaped body having a bottom (3) and a peripheral wall (5), a sealing means (25) for contacting said seal seat, and releasable fastening elements (6) interacting with the filler neck. At least two fastening elements are arranged to extend axially from the peripheral wall and each fastening element is arranged to engage with a corresponding locking means (16) located on the outer periphery of the filler neck remote from and facing away from the central axis of said opening.
