Abstract (en)

A child-proofing device (50) is provided for a closure (10) having an opening area (40) which must be accessed to allow it to be opened. The device (50) includes a obstruction member (60) adapted to move from a first position in which, in use, it obstructs access to the opening area to a second position in which it has moved sufficiently to allow access to the opening area. A child-proof closure (110) including a child-proofing device and a closure/container combination including child-proofing device are also provided.
