Abstract (en)

The present invention relates to a diagnostic and screening method for quantitatively measuring the total, active and optionally inactive form of a glucocorticoid receptor (GR) in a biological sample. In addition to diagnostic purposes, the method of the invention is useful in the evaluation and development of drugs, which act through glucocorticoid receptors. The method of the invention is also useful for the adjustment of glucocorticoid therapy in patients suffering from inflammatory or immunological diseases, such as arthritis, sarcoidosis, asthma, or lympho- or myeloproliferative diseases, autoimmune diseases and disorders associated with organ transplantation.
