Abstract (en)

[origin: EP1944399A1] An electronic Jacquard apparatus and an electronic Jacquard cassette wherein the needle selection operation in the electronic Jacquard apparatus can be performed stably over prolonged periods of time, and the select hooks can operate reliably even when the tips of the needles come into contact with the distal ends of the select hooks. The electronic Jacquard apparatus comprises select hooks, whose orientation is selected in accordance with the curving of actuating bodies comprising piezoelectric bodies via oscillating between an engaged orientation in which the select hooks engage with needles, and a non-engaged orientation in which the select hooks do not engage with the needles; and further comprises support pins that act as fulcra for the oscillation of the select hooks. The electronic Jacquard apparatus has a structure whereby the support pins and cassette main body constitute separate entities, and the support pins are supported by a holding plate that supports the cassette against the Jacquard main body.
