Abstract (en)

The formwork has a formwork wall (2) with a penetrating area (D1) remaining at a concrete part, and a non-penetrating area (U) formed in the formwork wall and extending to the penetrating area in a plane. The formwork wall is made of weldable material i.e. mild steel, and the penetrating and non-penetrating areas are welded with each other. The non-penetrating area is connected with the penetrating area by a reinforcing device i.e. inclined line. The non-penetrating area is provided with a separating agent (6) i.e. plastic foil.

Abstract (de)

Es wird eine Schalung (1,11,21,31,41,51) mit einer durchbrochenen, im Betonteil verbleibenden Schalungswandung (2,22,32,42,52) und einem undurchbrochenen Bereich (D) zum Erzeugen einer Sollrissstelle beschrieben. Für eine sichere Funktion wird vorgeschlagen, den undurchbrochenen Bereich (U) in der Schalungswandung so auszubilden, dass er sich im Wesentlichen in einer Ebene (E) mit der Schalungswandung erstreckt.
