Abstract (en)
The grid (3) has cross members, which are held by perpendicular supports, and forms a set of segments (4n), where the segments are separated from each other in separating points (5n), which are integrated in the supports. The supports are formed in such a manner that the segments are pivotable opposite to rotating points, which are formed by the supports, where the grid is attached to an object, such as vehicle (1), at a preset distance to the object over the supports, and the separating points are connected with each other by a mechanically detachable connection.

Abstract (de)
Vorgesehen wird, ein gegen HL-Geschosse wirkendes Schutzgitter (3, 3.1) flexibel zu gestalten, so dass es zumindest in den am Objekt (1) vorgesehenen Zugangsbereichen in sich verschwenkbar ist. Schutzgitter (3, 3.1) bestehend aus Querstreben (6 n), welche durch senkrechte Stützen (7 n) gehalten werden, und mehrere Segmente (4 n) bilden. In die Stützen (7 n) weisen vorgegebene Trennstellen (5 n) auf, in denen die Segmente (4 n) voneinander trennbar sind. Die Stützen (7 n) sind selber so gestaltet, dass sie neben einer Trennbarkeit in sich beweglich sind, so dass die Segmente (4 n) gegeneinander verschwenkbar sind.
