Abstract (en)

[origin: EP1944738A1] The device has a storage for different coins, and a coin input chamber (4) for inputting the coins. An electronic control unit (2) detects coin money balances, and an interface is provided for connection with an accounting calculating unit. A locking device is arranged in an area of the coin input chamber such that a provision cash box (10) with coins is set on the coin input chamber. A rotatable flap (15) floats the coins of the cash box at a coin module (1). The rotatable flap is activated when the cash box is provided to the coin module in a locking condition. An independent claim is also included for a method for providing a cash station with coins.
