Abstract (en)
[origin: WO2007052318A1] The invention concerns an internally aerated shoe, with a sole equipped with an air collection chamber (17) in the heel part of the sole and in communication with the exterior through an intake duct (18) of least one longitudinal duct (19) that extends in the intermediate part of the sole starting from said collection chamber (17) almost up to the toe of the shoe, of branch ducts (20) in communication with said longitudinal channel and retroflexed to the sides of the latter, of small additional chambers (21) in line with the toe part of the sole and in communication with the branch ducts, and through aeration holes (22) inline with the branch ducts and additional chambers and open above the sole towards the inside of the shoe.
