Abstract (en)

[origin: WO2007061621A2] A packaging for a receptacle loadable into an inhaler for pulmonary delivery of the contents of the receptacle. The packaging includes a base and a cover, which base has a surface defining a well that accommodates the receptacle. The well-defining surface includes a first region and a differently shaped second region, which first surface region is shaped to support the receptacle in alignment within the well, and which second surface region accommodates a first end of the receptacle aligned in the well and has a mouth geometry enlarged from the first surface region to allow a portion of an inhaler to be inserted therein to receive the first end of the receptacle for scooping the receptacle into the inhaler from the well.
