Abstract (en)

[origin: EP1946673A1] The device has a linear guiding unit (3) fastenable to a cupboard element (2), and an extraction unit (5) attachable with another linear guiding unit (6). A holder is provided for a front cover (11) that is fastenable to the extraction unit. The holder is connected with extraction unit at a lower region transverse to extraction direction. The extraction unit has a locking mechanism that locks the extraction unit in a closed position. The mechanism is detachable by swinging the holder, such that the extraction unit with the holder and the cover is extracted from the cupboard element.
