Abstract (en)  
[origin: EP1946688A2] The wall system has a multiple functional elements, each of which is coupled with a mechanism for moving each of the functional elements between an active and a passive position. The functional elements are accessible from the front side in their active position and particularly project out from the installation wall. The functional elements are fully lowered in the passive position. An aperture assigned to each functional element is closed flush with the installation wall. An independent claim is also included for a functional element.
