Abstract (en)  
[origin: EP1946890A1] The clamp has clamping jaws (8, 9) formed at carriages (6, 7). Each jaw has a vertical clamping surface on one side for a smaller span length and an opposite cascaded clamping surface for a larger span length. Each carriage has a left- and right-hand internal screw thread utilized from both sides, and is screwable by 180 degrees rotation on same side of a threaded spindle (2) upon left- and right-hand external screw threads (3, 4). The smaller and larger span lengths are provided without the projection of the carriages and jaws over a base body (1) that is made of steel, aluminum or plastic.
