Abstract (en)
[origin: WO2005007405A2] The invention relates to devices and methods for raising and/or lowering a lift by means of a pressure device comprising a roller. The roller is arranged on a cross-beam in such a manner that the roller can be selectively placed on and/or taken a cylinder or a lift arranged on the cylinder by a drive. The invention is characterised in that the pressure device or the cross-beam supporting the roller can be displaced together in such a manner that the distance of the roller from the cylinder can be selectively increased.
