Abstract (en)

[origin: EP1946989A2] The method involves transferring the switch adjusting command to a switch controller (2a,2b,2c) connected at the switch (1a,1b,1c) from a mobile control device (5) by a wireless interface. The mobile control device carries out a determination of its actual position, where the determined position and the switch adjusting command are transferred to switch controller. The control signal is transmitted from the switch controller to the switch, if the position of the mobile control device lies within a switch specific fixed activating area (4a,4b,4c). Independent claims are also included for the following: (1) a switch controller for placing an electrical position regulating switch (2) a mobile control device for placing an electrical position regulating switch (3) an arrangement for placing an electrical position regulating switch.
