Abstract (en)

In a bulk package system the stack of plates having a height H plate is contacted and stabilized by an internal packaging structure with a height Hint which is higher than the stack to aid in protection of the plate from forces from above. A separate external packaging structure is provided with a height H ext being equal or larger than Hint. Forces acting upon the external packaging structure caused by e.g. collisions are not transferred to the stack of plates. The external packaging structure is assembled after the internal packaging structure.
