Abstract (en)

[origin: EP1947028A2] The device has supply ranges (2,3) that are arranged one above the other, where each supply range has a projection (4,8), which is closely lockable by a covering (5). The covering is sealed with the projection under formation of a seam. The supply ranges are connected outside by a welded joint for the seam. The covering is provided for multiple projections. An independent claim is also included for a method for storage and dosage of multiple components.
