Abstract (en)
[origin: EP1947251A2] The shower device (11) comprises at least one sprinkler (20) that is movable between a rest position and is lowered in a section of the upper surface of the outer side (13) of the shower device and, in the active position, is movable out of the shower device. There is an operating system (37) for moving the sprinkler from the rest position to the active position, with the operating system being activated via the water streaming from the sprinkler.
