Abstract (en)
[origin: EP1947254A2] The structure (4) has a brickwork (2) and a laminar concrete plate (6) that is engaged with lateral areas in the brickwork in a form- and force-fitting manner. A beam bundle (18) includes a lateral extension and is arranged in the concrete plate. A screw (14) is screwed into a wooden beam (10) in a perpendicular orientation at a perforation position by the beam bundle. The brickwork adjusts the engagement of the lateral areas of the concrete plate with a groove-like fillet indentation.
