Abstract (en)

[origin: EP1947276A1] The element has a rotatable element to vertically and parallelly move facade elements (20, 23, 26) that are vertically provided on top of each other in a closed condition. The facade elements having glass are movable into an opened position by their movement in the opposite direction such that two vertically separated openings are provided in an opened condition. The rotatable and facade elements are coupled with each other by a coupling element e.g. belt. The facade elements are additionally vertically movable into another opened position in which only one opening is provided.
