Abstract (en)

[origin: EP1947279A2] The cover has an end cap (2) formed in such a manner that it is arranged laterally on a housing, and a cover cap (3) connectable to or detachable from the end cap. The end cap is suspensible or retractable on or in the housing in a direction. The cover cap is connectable or detachable in a direction perpendicular to the former direction. The cover cap comprises connecting terminals formed as a plug connector (14), and the end cap comprises a metallic core (4) coated with plastic. Independent claims are also included for the following: (1) a device for arranging a housing of an actuating drive for actuation of a wing of a window, particularly a tilt and turn window or tilt and flap window (2) a method for arranging a housing of an actuating drive for actuation of a wing of a window, particularly a tilt and turn window or tilt and flap window.
