Abstract (en)

[origin: EP1947283A2] The leaf has a profile end cap (5) provided at regions, at which shield and leaf profiles (3, 4) to be connected are attached together. The profiles have a respective geometry (20) corresponding to respective profile cross-sections (19) of the adjacent profiles. A part, which is separated, is excluded at an end of the profiles, where the end is connected with the profiles. The part is replaced by the profile end cap, and one end of the leaf profile or shield profile is formed in a stepped manner, where the end is connected to the cap. An independent claim is also included for a method for manufacturing a window-or door leaf.
