Abstract (en)

[origin: EP1947287A1] The shutter has a base (1) for receiving a head of a motor and integrated on a support wall (2). The base comprises electronic components for managing and controlling the motor, and a receiving unit (7) receives the electronic components in a removable manner. The receiving unit is in the form of a slide dismountable with respect to the support wall. The receiving unit has a locking unit for locking a support card (9) of the electronic components. The motor is supplied with electricity via a power supply cable (5).
