Abstract (en)

[origin: EP1947398A1] The device has a ventilation device (33) arranged in a roof area (12) of another room (2,3) of the building inside an equipment enclosure (16) located in another room. A partition wall (6) separates both the walls from each other, which is provided with a supply air wall opening (27) and a discharge wall opening (29). The ventilation device is directly connected pneumatically to the supply air wall opening and the discharge wall opening over a room area (26,30) of the equipment enclosure and over interconnection of the inner housing containing the ventilation device.
