Abstract (en)

[origin: EP1947406A2] The invention relates to a liquid-proof insert (1) arranged for placement on the floor under a domestic appliance and/or a plumbing, and which, in the placed position, is effective to collect leaking liquid. The liquid-proof insert comprises a four-sided plate (2) of a liquid-tight material, preferably of polymer material, which in three sides has a raised border (3, 4, 5) and a fourth that forms the front side (6) of the liquid-proof insert. The liquid-proof insert is characterized in that a lip (13) connects to the front side, in the underside of which lip two or more raised elevations (14) are formed and effective for pressing down of the lip, toward the floor. The lip is elongate and preferably runs along the front side of the liquid-proof insert, and the elevations extend substantially transverse to the longitudinal direction of the lip to a level above the same that forms a support plane (SP) for a skirting board supportable against the elevations.
