Abstract (en)
[origin: WO2007041803A1] A connector (90) consists of a first connector component (52) and a second connector component (54) and an engagement mechanism (56, 58). A first connector component (52) and a second connector component (54) of a first connector (90a) are releasably engageable with a second connector component (54) and a first connector component (52) of a second connector (90b). In this way the first connector (90a) and the second connector (90b) are releasably connectable. The connector (90) of the present invention is releasably connectable with another like connector (90).
