Abstract (en)

[origin: WO2007053002A1] A cabinet (2) with an open front (4) for storage and display of heated or cooled food products, comprising a first duct (12), a vertical duct (14), shelves (22), air temperature regulating means (44), a chamber (34) and air circulation means (38). A food storage space (24) has a first flow member (20, 22b, 22c) providing a ceiling of the storage space and a tubular second flow member (30) at the back of the storage space. Walls of the flow members have openings which oppose openings of the ducts. The flow members also have openings (26, 32) opposing the storage space. The openings (26) of the first flow members are arranged at different distances from the front. The air circulation means can circulate air through the ducts, the flow members, the storage spaces, and through the temperature regulating means, thereby creating air curtains at the fronts of the storage spaces.
