Abstract (en)

[origin: WO2007057739A1] An implant for sensing parameters within an anatomical vessel network of a patient includes a first fixation element having an expanded geometry for firmly engaging a wall of the vessel network at a first longitudinal location, a second fixation element having an expanded geometry for firmly engaging the wall of vessel network at a second longitudinal location, a connecting element mechanically coupling the first and second fixation elements together in an articulating manner, and a sensing element mechanically coupled to the first fixation element opposite the connecting element.
