Abstract (en)
[origin: WO2007057178A2] The aim of the invention is to provide an angiogenesis-promoting substrate which can be produced in a simple manner and with reproducible quality and which remains stable especially under physiological conditions for a predetermined period of time and is yet biocompatible and resorbable. For this purpose, the angiogenesis-promoting substrate comprises a porous shaped body which consists of a gelatinous material that is insoluble and resorbable under physiological conditions.
