Abstract (en)

[origin: WO2007042029A1] An electric ion transmitting device for treating a living object, the device comprising an ion generator for generating a dose of air-ions, a radiation emitting element for directing a dose of electromagnetic radiation, e.g. light, in a direction, and a feedback structure which is adapted to determine an electrical current through a portion of the object. A method of treating an object with air-ions, the method comprising the steps of: locating the object in a support structure which is electrically isolated from ambient space; exposing the object to a controlled dose of electromagnetic radiation, and exposing the object to a controlled dose of air-ions.
