Abstract (en)

[origin: WO2007054083A1] The present invention relates to a wind deflector (1) in the motor vehicle sector, with a base element (2) which can be mounted on a part of a motor vehicle, with an opener (3) which is pivotally coupled to the base element (2), with an adjusting device (4) for pivoting the opener (3) between a stowed position and an opened-out position, and with a deflector element (5) which can be mounted on the base element (2) and on the opener (3) for the purpose of clamping the deflector element (5) therebetween when the opener (3) is in the opened-out position, wherein the deflector element (5) can be fastened to the base element (2) and/or to the opener (3) by means of a detachable connection.
