Abstract (en)
[origin: WO2007057513A1] A wall structure made of fire-resistant material comprising at least two mainly rectangular panel-like wall elements, which are adapted to be joined together by means of there longer sides and which comprise a surface plate element (1, 1') as well as a support element (2, 2') and an insulation element (3, 3'), which are to be attached thereto. The longer sides of the wall elements are provided with bends (1a, 1b, 1b') formed of the edges of the surface plate element, which are shaped and dimensioned so that the wall elements can be joined together parallel with their shorter sides and, when installed, are partially overlapping each other and locked transversely with respect to the plane of the wall elements without any separate fastening members.
