Abstract (en)

[origin: FR2892821A1] The device has a container holder (2) including seats for receiving containers (1) with barcodes (3). A detector (4) detects the presence of the containers in the corresponding seat, and a reader (5) reads the barcodes. A capturing unit (6) e.g. mouse, captures references of a sample. A central processing unit (8) correlates the read and captured information for the same container. A microprocessor (9) manages and drives different units of the device. An automated pipettor (12) samples the sample from a primary container and transfers the sample into a secondary container.
