Abstract (en)

[origin: FR2891375A1] The lens has zones (2a, 2c) associated to polarizing filters, where the size and position of the zones are determined based on an eye/head behavior of a wearer e.g. driver, along different orientations. The polarizing filter of one of the zones is oriented vertically with respect to a usage position of the lens that is utilized in a glass (2), where the vertical zone is situated adjacent to a temporal lateral edge of the lens with respect to the usage position.
