Abstract (en)

A positioning sleeve (10, 10', 10", 100) includes first and second surrounding portions (121, 122) adapted to surround outer and inner tube sections (210, 220) of a telescopic rod (200), respectively. The second surrounding portion (122) has a plurality of angularly spaced-apart recessed parts (1222) and a plurality of compressible retaining units (13, 13', 13", 130) respectively disposed in the recessed parts (1222). Each retaining unit (13, 13', 13", 130) is connected to the corresponding recessed part (1222), and has an engaging part (132, 132', 132", 170) projecting toward a through hole (11) in the second surrounding portion (122), and a deformable space (14) defined between the engaging part (132, 132', 132", 170) and the respective recessed part (1222). The deformable space (14) is deformed when the inner tube section (220) is friction-fitted into the second surrounding portion (122) and when the engaging part (132, 132', 132", 170) of each retaining unit (13, 13', 13", 130) abuts the inner tube section (220).
