Abstract (en)
The invention relates to a collapsible bed structure with telescopic bed sections (1-5) and a piece of luggage (6) having a compartment with such a bed structure. The bed structure can be brought from a compact, storage configuration to an extended, use configuration. Each bed section (1-5) comprises a flat part (11) for supporting a user and oblong lateral frame parts (12,13) between which the flat part (11) is suspended. The oblong lateral frame parts (12,13) of the successive bed sections (1-5) slidably engage each other. The collapsible bed structure further comprises a plurality of support members (14,31-35), pivotally connected between the frame parts (12,13). The successive support members (14,31-35) have corresponding shapes which fit into each other in the compact configuration of the bed structure.
