Abstract (en)

[origin: EP1949941A1] The device has a retaining plate (3) on which front retaining units (4) are mounted, where the retaining units are constituted of an assembly of lateral retaining left and right walls (4a, 4b) forming an enclosure. A front end or rear end of a shoe is engaged in the enclosure. An adjustment unit adjusts distance between the walls, which are made of deformable plastic material. The adjustment unit is constituted of an adjusting buckle (12) with a pivoting ratchet cooperating with locking teeth (11).
