Abstract (en)
[origin: EP1949945A2] The invention relates to a structure which can be moved between storage and erected in use forms via the user of one or more connecting members. The connecting member (2) can be provided with at least two angularly disposed arms (4,6), at least one of the arms (4,6) provided to receive an edge of a panel (14,16) of the structure in the erected form. The other of the arms (4,6) may receive an edge of another panel (4,6) or may be formed integrally with said further panel (4,6). The structure in accordance with the invention can be moved between forms without the need for tools.
